

RETEK

RENEWABLE ENERGY LAB

COMPANY PROFILE

ENERGY · INFRASTRUCTURE · SUSTAINABILITY

Shaping the future of energy and infrastructure

We turn complex initiatives into sustainable, bankable models —
for investors, industry and institutions.

One vision for high-value initiatives

RETEK exists to give a single direction to what usually stays fragmented.

We are an independent company developing complex initiatives across energy, infrastructure and sustainability. We bring technical, financial and managerial expertise together under a single vision, to support investors, corporations and strategic partners in planning, structuring and delivering high-value projects. Our independence lets us serve the interest of the project and of those who back it, free from vested interests — with judgment anchored to real performance rather than narrative.

Energy

Generation, efficiency and management geared to measurable performance.

Infrastructure

Capital-intensive projects, structured to last and governed end-to-end.

Sustainability

ESG criteria built into strategy, not bolted on afterwards.

From feasibility to lasting value

We do not simply deliver projects. We build sustainable models, governing every phase of the initiative's lifecycle under a single technical, financial and managerial vision. This is how a complex initiative becomes a structured, bankable transaction.

01

Analysis & feasibility

We assess the initiative on technical, economic and financial grounds, defining the conditions for soundness and bankability before any commitment.

02

Structuring

We design the financial and contractual model — project finance, PPP, performance-based contracts — aligning risks, returns and responsibilities.

03

Financial close

We take the transaction through to financial close, integrating the needs of investors, institutions and partners into a coherent, verifiable structure.

04

Delivery & monitoring

We support the entire project lifecycle, overseeing execution and the generation of measurable value over the long term.

Structure before the project

- **Independence**

We serve the interest of the project and of those who back it, free from vested interests. It is the condition of our judgment.

- **A single vision**

Engineering, finance and management do not run in parallel: they converge into one direction, from feasibility to delivery.

- **Integrated expertise**

Engineering, project finance and innovative contract models, brought together in a single partner, with no hand-offs that dissipate value.

- **Lasting value**

Models built to be bankable and to generate real, measurable value over the long term.

Three areas of value

Three fields, one goal: turning complex initiatives into structured, bankable transactions that generate lasting value.

01 Project Finance & PPP

FINANCIAL STRUCTURING

We structure complex transactions for investors, institutions and major organizations with technically, economically and financially sustainable models. From feasibility assessment to financial close, we support the entire project lifecycle.

02 Energy Performance Contracts (EPC)

MEASURABLE EFFICIENCY

We develop performance-based solutions alongside energy operators, ESCOs, investors and industrial groups, with particular strength in building energy efficiency, beyond photovoltaics alone. Real, measurable value over the long term.

03 ESG & Sustainability

SUSTAINABLE STRATEGY

We embed ESG criteria into the strategies of companies, investors and organizations. Not as a compliance exercise, but as a lever for sustainable growth that creates lasting value.

Beyond photovoltaics, inside the building

Our energy-efficiency expertise goes beyond photovoltaics alone: we work on the building and its plant rooms — from systems to envelopes to management controls — where consumption falls and performance is measured. This is where technical data becomes the basis of a contract and of a financial model that is sustainable over time.

Real projects · plant rooms and building energy efficiency.

We do not simply deliver projects.

**We create sustainable models
designed to generate long-
term value.**

Let's talk about your next project.

Tell us about your initiative: together we build a sustainable, high-value model.
